

Fitting instructions INT210 EX and EXD Barndoor set.

Place the Barndoor set on a desk or hard surface, position the reflector as shown in Figure 1 within the rim holding pegs.

With the reflector rim resting on the top of the spring clip holder gently press the edge of the reflector inwards, the reflector will now drop into place as shown in Figure 3.

Pull the spring retaining clip around the reflector behind the retaining clip as shown in figure 4.

At first this may be a little tight (its designed that way) so it will give you years of service without becoming loose.

Now you can fit the reflector and head to your light stand.

Always remember to TURN OFF the modeling lamp when using Honeycomb grids or colour gels after you have tested for positioning.

This is to enable a safe airflow around the flash head and flashtube and will prolong the life of the unit.

Failure to comply will more than likely damage the head and also burn the honeycomb and colour gels.
